## **OUTREACH AND EXTENSION PROGRAM**

**Local Labor Markets**—the objective of this program is to improve the match between the demand for, supply of, and institutional influences on local labor market areas. The program analyzes data from employers (both public and private), workers and training institutions to enhance workforce development efforts at the local level. These analyses have led to several outcomes, including: 1) new employers moving to the community based on the information that is available; 2) educational institutions developing new programs to meet labor demand; 3) existing employers adjusting practices (e.g., hiring, recruitment, and training); and 4) public action taken to address labor market issues (e.g., child care, housing, and transportation programs). Local labor market analyses have been conducted in more than 50 Wisconsin counties and many have been completed multiple times.
